this book explores a wide variety of theoretically central issues in the framework of head driven phrase structure grammar hpsg a major theory of syntactic representation particularly in the domain of natural language computation hpsg is a strongly lexicon driven theory like several others on the scene but unlike the others it also relies heavily on an explicit assignment of linguistic objects to membership in a hierarchically organised network of types where constraints associated with any given type are inherited by all of its subtypes this theoretical architecture allows hpsg considerable flexibility within the confines of a highly restrictive mathematically explicit formalism requiring no derivational machinery and invoking only a single level of syntactic representation the separate chapters consider a variety of problematic phenomena in german japanese and english and suggest important extensions of and revisions to the picture of hpsg
